Ground Floor Plan

Area Before Work

A two-level atrium space provides a large shared learning environment at the heart of the school. Connectivity, Flexibility and Sustainability are underlying concepts behind the design of this building renovation project which transforms an existing two-storey classroom block into a modern learning environment.

"The colours in Te Manawanui are all different and that looks really cool. It's good to have a really big space in our school because this school is really big. . Altogether, I love Te Manawanui plus St Clair School is packed with mobile e-devices so I've got to say we are a really lucky school!"

Orlando, Student St Clair School
